J. 316:631-637(1996).

BLOCHEM. J. 316:631-637(1996).

-!- FUNCTION: PYRUVATE CARBOXYLASE CATALYZES A 2-STEP REACTION, INVOLVING THE ATP-DEPENDENT CARBOXYLATION OF THE COVALENTLY ATTACHED BIOTIN IN THE FIRST STEP AND THE TRANSFER OF THE CARBOXYL GROUP TO PYRUVATE IN THE SECOND. CATALYZES IN A TISSUE SPECIFIC MANNER, THE INITIAL REACTIONS OF GLUCOSE (LIVER, KIDNEY) AND LIPID (ADIPOSE TISSUE, LIVER, BRAIN) SYNTHESIS FROM PYRUVATE.

-!- CATALYTIC ACTIVITY: ATP + PYRUVATE + HCO(3)(-) = ADP + phosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

-i-FUNCTION: PYRUVATE CARBOXYLASE CATALYZES A 2-STEP REACTION,
INVOLVING THE ATP-DEPENDENT CARBOXYLATION OF THE COVALENTLY
ATTACHED BIOTHN IN THE FIRST STEP AND THE TRANSFER OF THE
CARBOXYL GROUP TO PYRUVATE IN THE SECOND. CATALYZES IN A TISSUE
SPECIFIC MANNER, THE INITIAL REACTIONS OF GLUCOSE (LIVER, KIDNEY)
AND LIPID (ADIPOSE TISSUE, LIVER, BRAIN) SYNTHESIE FROM PYRUVATE.

-i- CATALYTIC ACTIVITY: ATP + PYTUVATE + HCO(3)(-) = ADP + phosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY: WITH OTHER BIOTIN CARBOXYLASES, LIPOAMIDE TRANSFERASES AND CARBAMYL PHOSPHATE SYNTHETASES.

"Molecular characterization of pyruvate carboxylase deficiency in two
consanguineous families.";
                                                                                                                                                                                                                                                                                                                                                                                                       SUBCELLULAR LOCATION: Mitochondrial matrix.

SUBCELLULAR LOCATION: Mitochondrial matrix.

DISFASS: Defects in PC are the cause of pyruvate carboxylase deficiency (PC deficiency) [MIM:266150] leading to lactic acidosis, mental retardation and death. It occurs in three forms: mild or type A, severe neonatal or type B, and a very mild
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ligase; Multifunctional enzyme; Biotin; Manganese; Gluconeogenesis; ATP-binding; Mitochondrion; Lipid synthesis; Transit peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PYRUVATE CARBOXYLASE.

-!- FUNCTION: PYRUVATE CARBOXYLASE CATALYZES A 2-STEP REACTION,
INVOLVING THE ATP-DEPENDENT CARBOXXLATION OF THE COVALENTLY
ATTACHED BIOTHN IN THE FIRST STEP AND THE TRANSFER OF THE CARBOXYL
GROUP TO PYRUVATE IN THE SECOND. THE MAXIMUM ACTIVITY IS AT PH 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AND 60 DEGREES CELSIUS.
CATALYTIC ACTIVITY: ATP + pyruvate + HCO(3)(-) = ADP + phosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PATHWAY: Gluconeogenesis.
SUBUNIT: HETEROOCTAMER OF FOUR A AND FOUR B SUBUNITS.
SIMILARITY: WITH OTHER BIOTIN CARBOXYLASES, LIPOAMIDE TRANSFERASES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Smith D.R., Doucette-Stamm L.A., Deloughery C., Lee H.-M., Dubois J., Aldredge T., Bashirzadeh R., Blakely D., Cook R., Gilbert K., Harrison D., Hong L., Keagle P., Lumm W., Pothier B., Qiu D., Spadafora R., Vicare R., Wang Y., Wierzbowski J., Gibson R., Jiwani N., Caruso A., Bush D., Safer H., Patwell D., Prabhakar S., McDougall S., Shimer G., Goyal A., Pietrovski S., Church G.M., Daniels C.J., Mao J.-I., Rice P., Noelling J., Reeve J.N.; "Complete genome sequence of Methanobacterium thermoautotrophicum deltaH: functional analysis and comparative genomics.";

CATALYTIC ACTIVITY: ATP + biotin-carboxyl-carrier protein + CO(2) = ADP + phosphate + carboxylotin-carboxyl-carrier protein.

PATHWAY: LONG-chain fatty acid biosynthesis; first step.

SUBUNIT: ACETYL-COA CARBOXYLASE IS AN HETEROHEXAMER OF BIOTIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hayashi T., Makino K., Ohdishi M., Kurokawa K., Ishii K., Yokoyama K., Han C.-G., Ohtsubo E., Nakayama K., Murata T., Tanaka M., Tobe T., Lida T., Takami H., Honda T., Sasakawa C., Ogasawara N., Yasunaga T., Kuhara S., Shiba T., Hattori M., Shinagawa H.; "Complete genome sequence of enterohemorrhagic Escherichia coli O157:H7 and genomic comparison with a laboratory strain K-12.";
                                                                                                                                                                                                                      CARBOXYL CARRIER PROTEIN, BIOTIN CARBOXYLASE AND THE TWO SUBUNITS OF CARBOXYL TRANSFERASE IN A 2:2 COMPLEX (By similarity). SIMILARITY: TO OTHER BIOTIN-DEPENDENT ENZYMES AND CARBAMOYL-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Perna N.T., Plunkett G.
